SUMMARY

Applied AI Engineer with 5 years in software engineering, including 2+ forward-deployed, building production Generative AI and full-stack applications end to end. Shipped 5 enterprise AI products from proof-of-concept through deployment, evaluation and iteration with sales, business and data teams. Strong across agentic AI, MCP, RAG and LLM evaluation, Python, FastAPI, React, AWS, Kubernetes and Terraform.

PROFESSIONAL EXPERIENCE

Engineer II, Forward Deployed (AI) - S&P Global Energy *03/2025 – Present | Hyderabad, India*

Tech: Python, LangChain, FastMCP, OpenSearch, FastAPI, React, PostgreSQL, Kubernetes, Kong API Gateway, S3, LangSmith, pgvector.

- Lead a 4-engineer forward-deployed AI team as technical lead, delivering enterprise proofs-of-concept through production releases, driving executive demos to technical architects and tower heads, and mentoring engineers.

Pitch Intel — internal sales intelligence platform for S&P Global Energy's commercial and sales teams.

- Cut enterprise pitch-report preparation cycle time from 3 days to 30 minutes by engineering multi-agent systems that automate multi-source research (web, Salesforce, proprietary databases) and export publication-ready formats (HTML, PDF, PPT, infographics).
- Built a custom drag-and-drop workflow builder leveraging existing AI agents to execute user-defined sales pipelines with RBAC enforcement.
- Integrated evaluation pipelines (public distributed traces, golden datasets, annotation queues and LLM-as-a-judge frameworks via the LangSmith API), enhancing observability and capturing SME scores directly within the platform.

Chat AI MCP — customer-facing MCP server exposing S&P Global's core data to external AI assistants.

- Used by 200+ customers, it lets assistants such as Microsoft Copilot, Claude and Databricks execute LLM-generated spgci-pysdk Python to retrieve structured, AI-ready data, cutting SME review cycle time by 90% by reusing the existing retrieval path.

RAPID MCP — internal MCP server over S&P Global Energy's microservices estate.

- Consolidated 300+ microservice endpoints into a 4-tool MCP interface (instructions, search, metadata, execute) optimized against context-window limits, and added a hybrid reranking strategy that raised API-selection accuracy from 85% to over 95%.

API Platform — internal developer tooling for S&P Global's AI service teams.

- Standardized pre-release testing across 5+ engineering teams with an MCP Playground backed by a consistency-evaluation framework measuring tool selection and argument reliability across repeated runs.

Consultant, Forward Deployed - Genpact *02/2024 – 03/2025 | Hyderabad, India*

Tech: Python, LangGraph, FastAPI, React, Oracle DB, Azure OpenAI, EC2, S3, Erlang OTP, Jenkins, RabbitMQ, Celery.

Product Intelligence Agent — analytics over Shutterfly's product and order data.

- Reduced data team workload by ~25% using a Text-to-SQL agent for natural-language database queries, paired with a watchdog agent that proactively flags material wastage, alternatives and delays.

Forge Module — Erlang/OTP batch processing platform for Shutterfly.

- Boosted enterprise product line throughput by ~50% by modernizing legacy monoliths into an asynchronous microservices architecture.
- Built a custom Mnesia database viewer for troubleshooting Erlang production incidents, saving an estimated $10K per incident.

Jr. Full Stack Engineer, Creditsafe Technology *10/2021 – 02/2024 | Hyderabad, India*

Tech: Python, FastAPI, Flask, React, JavaScript, PostgreSQL, ECS, S3, Terraform, Azure Pipelines, .NET, Jinja.

Ledger Insights — enterprise credit-risk platform, migrated from .NET to cloud microservices.

- Delivered high-value enterprise features (CFO reports, trade groups, AR workflows) and a redesigned UI that supported ~$150K in closed B2B deals and partnerships.

Data Governance Application — cross-entity supply-data governance platform.

- Elevated supply-data quality from ~85% to ~95% via a cross-entity governance platform supporting audited corrections, and engineered REST APIs to synchronize US customer data back to production databases.

PROJECTS

One Agent — *serverless platform for building and running multi-agent AI workflows* **[Demo · Architecture · GitHub]**

Tech: Python, React, AWS Lambda, Bedrock AgentCore, Strands, S3 Vectors, DynamoDB, MCP, Code interpreter, GitHub Actions, Terraform.

- Architected a multi-tenant serverless platform for building and running multi-agent AI workflows end to end: event-driven ingestion, hybrid retrieval with citations, sandboxed tool building, scheduled runs, evaluation and cost governance across 10+ AWS services.
- Built a multi-agent runtime on Bedrock AgentCore and Strands with graph and swarm topologies, per-node overrides, MCP and custom tool integration, planner-driven execution, live streaming runs, human-in-the-loop, AgentCore policy and user-scoped long-term memory.
- Closed the quality loop with a Ragas-aligned evaluation lab: golden datasets built from live traces, annotation queues, deterministic retrieval and trajectory scoring, LLM-as-a-judge with structured outputs, side-by-side trace replay and A/B testing across models.

SKILLS

- **Agentic AI** — Multi-Agent Orchestration, LangChain, LangGraph, Strands, Tool Calling, Model Context Protocol (MCP).
- **Retrieval & LLMOps** — RAG, Hybrid Search, Embeddings, Reranking, OpenSearch, pgvector, Evaluation, Ragas, LangSmith.
- **Full-Stack** — Python, FastAPI, React, TypeScript, PostgreSQL, Oracle DB, SQLAlchemy, REST APIs.
- **Cloud & Platform** — AWS, Bedrock, AgentCore, Kubernetes, Docker, Terraform, OpenTelemetry.

EDUCATION & AWARDS

S&P Global Energy Recognition Program (2026) • Genpact Outstanding Contribution (2024) • Creditsafe Extra Mile Award (2023)

EDUCATION

Bachelor of Technology (Mechanical Engineering) - Chaitanya Institute of Science and Technology | JNTUK 2021 | Kakinada, AP, India
